

SeaDataNet

*PAN-EUROPEAN INFRASTRUCTURE
FOR OCEAN & MARINE DATA
MANAGEMENT*

OPEN ISSUES

- Use the latest version on DIVA 4.6.9
- more efforts on tuning of correlation length and signal to noise ratio
- Error field definition: clever man error (ispec=111)
- reference fields definition → semi-normed analysis
- outlier elimination → to be tested according
- duplicate check: are stored in the inputdata directory with the file extension `_bkp`
- Season definition/error masking definition at 30%
- how to handle data concentration in some period/region at high frequency → weighting function

OPEN ISSUES

- stability analysis
- common validation with WOA13
- Include in the mailing list the EMODNET chemistry product people in order to share the discussion on the climatology
- Include in the product metadata the DIVA settings both in the netcdf and the xml output
- Product documentation with a user prospective → regional contribution to D10.3 and D10.4 should go as side doc in the catalogue

- Scientific Publication
- Dick → insert link of product documentation and scientific publication
- DOI request (one per map set for all regions)
- netcdf format → merge all the seasons/months in one netcdf
- Harvesting 1.16M of CDI
- 68000 errors → 2 weeks for delivery WP10 (they might be ignored) end of April
- MARIS checked for complementary LOCAL CDI and EDMO code in ODV

MyO data collection – Release of V1.2

- instrument type
