# Simplification on User roles and Access rights

M. Fichaut

SeaDataCloud

# Access to SDN data

- Access to the data is actually managed by a combination of
  - Roles of the connected users (vocab C86)
    - Public, Administrator, Academic, Commercial, Partner…
  - Access restriction policies (Vocab L08)
    - Academic? Commercial, Moratorium, No access, Unrestricted, SeaDataNet licence….

- With a complicated algorithm which actually results
  - Giving **direct access** to every role for **Unrestricted and SeaDataNet licence data**
  - Giving **by negotiation** access to every role **for all other access restrictions**
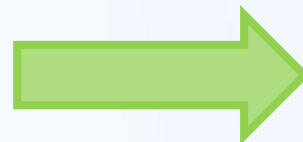

# Simplications

- All SeaDataNet users will have the "Public Role"

- For the access rights

FE - Commercial charge

LI - Licence

MO - Moratorium

NA - No access

OG - Organisation

RS - By negotiation

SR - Academic

→ By negotiation

UN - Unrestricted

LS - SeaDataNet Licence

→ CC-BY

sdn-userdesk@seadatanet.org – www.seadatanet.org

# Implications

- For new MarineID users
  - They will receive a MarineID login/password
  - They will be assigned a Public Role
  - They will agree for the SeaDataNet Licence each time they will download data

- For data centres
  - They will not any more affect roles to their national users
